

escuela técnica superior
de ingeniería informática

Lab 2-3
CMS: Wordpress

Departamento de
Lenguajes y Sistemas Informáticos

UNIVERSIDAD D SEVILLA

Outline

- Wordpress installation
- Wordpress
- 1st and 2nd deliverables (CMS)

Outline

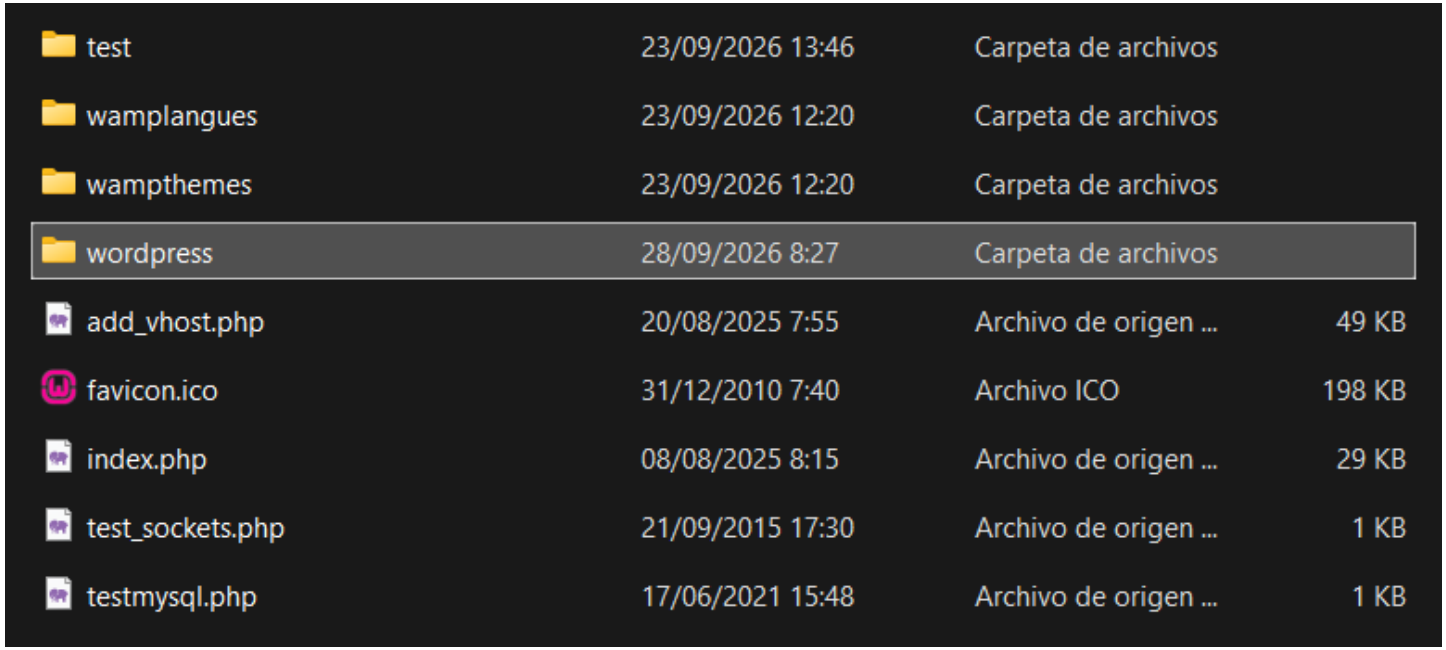

- **Wordpress installation**
- Wordpress
- 1st and 2nd deliverables (CMS)

Wordpress installation

Wordpress installation

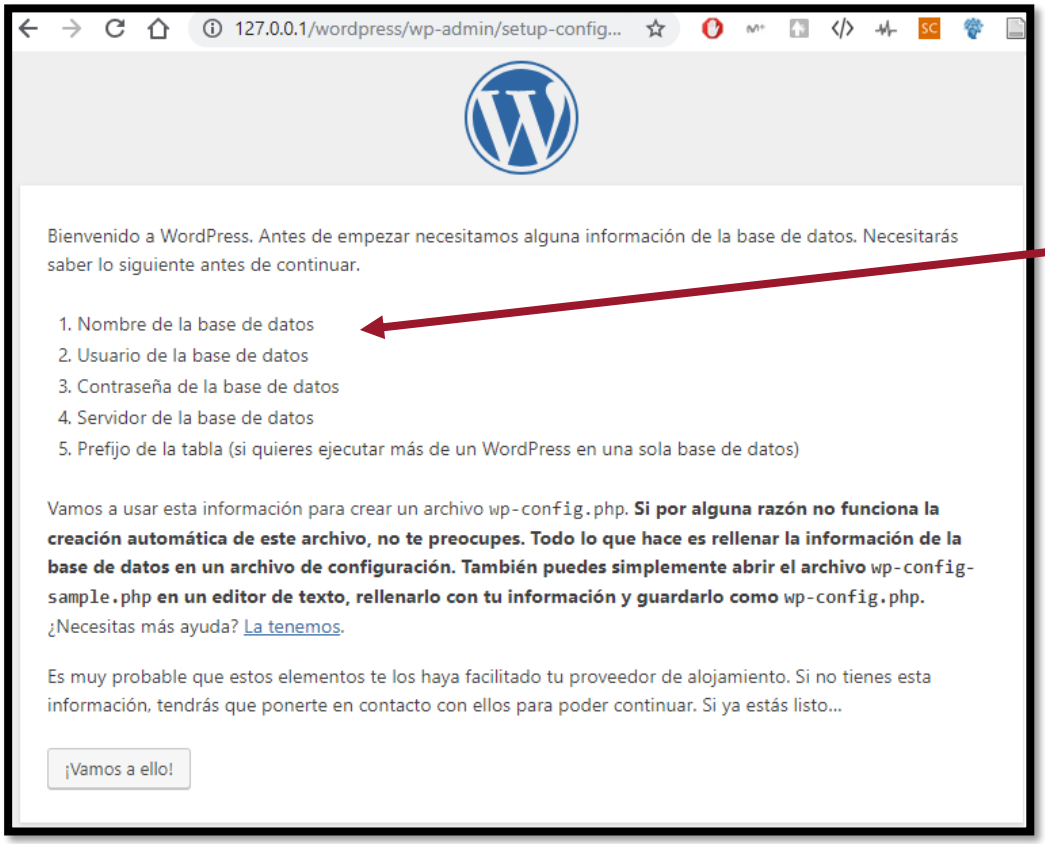

- Unzip downloaded file to get *wordpress* folder
- If you installed W(L,M)AMP, copy it in apache2/htdocs or copy it in the folder where index from previous lab was located

Wordpress installation

- Access http://localhost:8080/wordpress
  - It is the same as http://127.0.0.1/wordpress
- This initiates the installation process

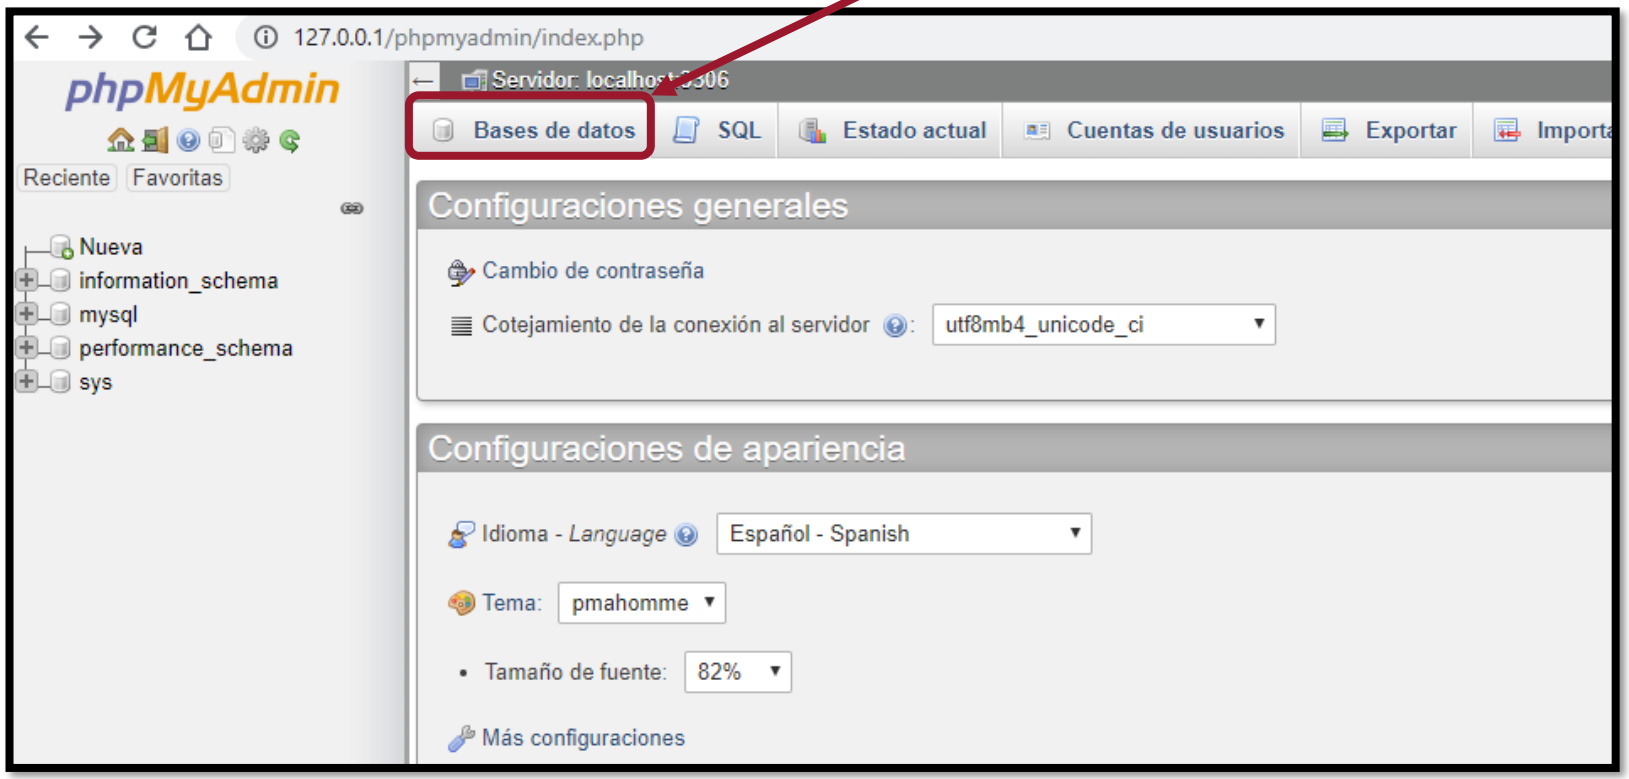

Wordpress installation

- We need to provide a database, so let's create it first thing

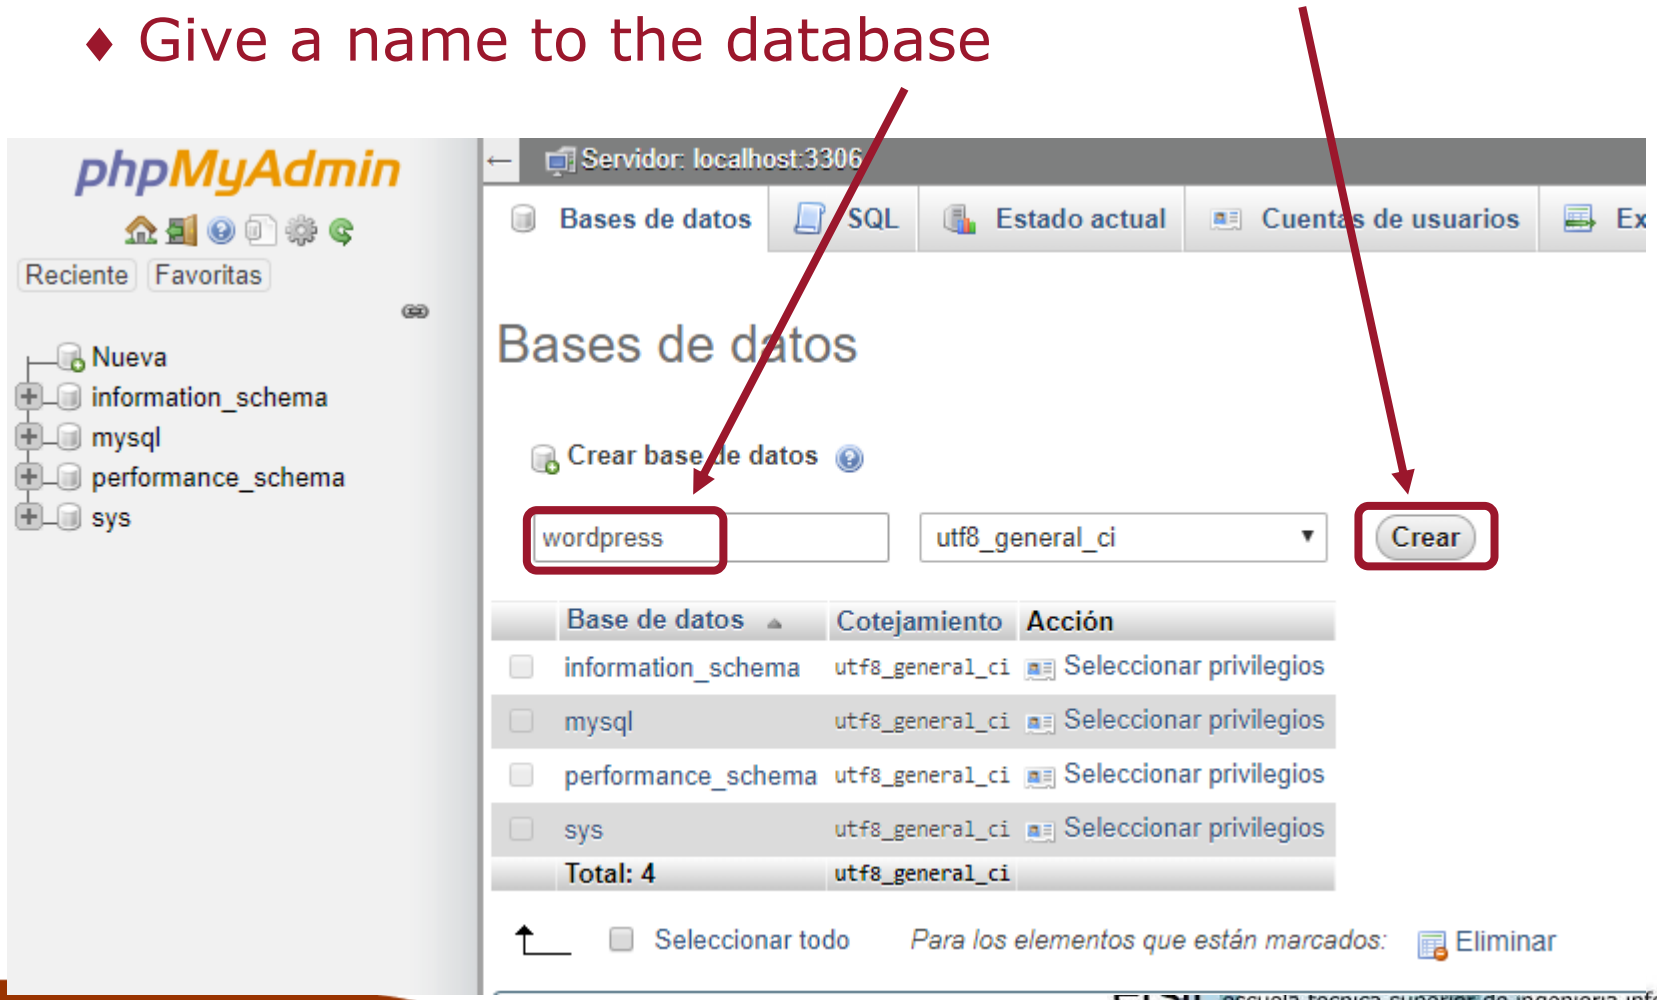

Wordpress installation – Database creation

- Access phpMyAdmin
  - Go to *Bases de datos*

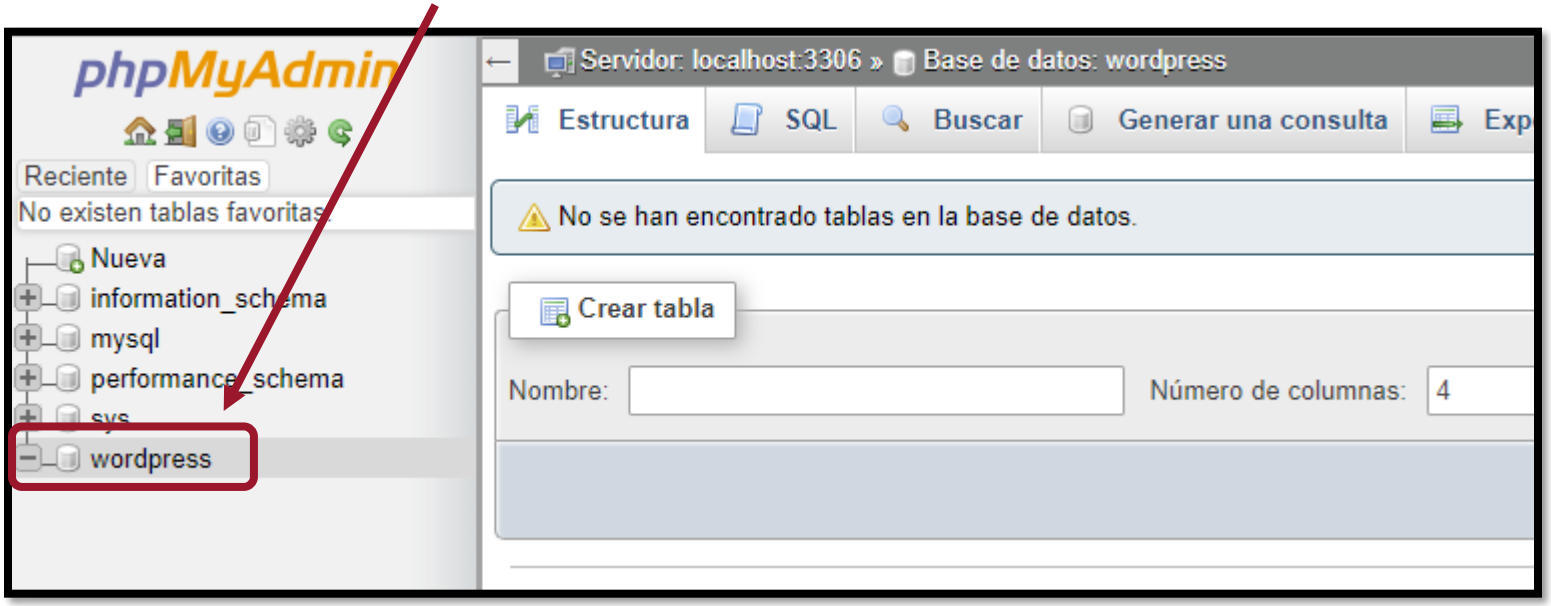

Wordpress installation – Database creation

- Create database
  - Give a name to the database

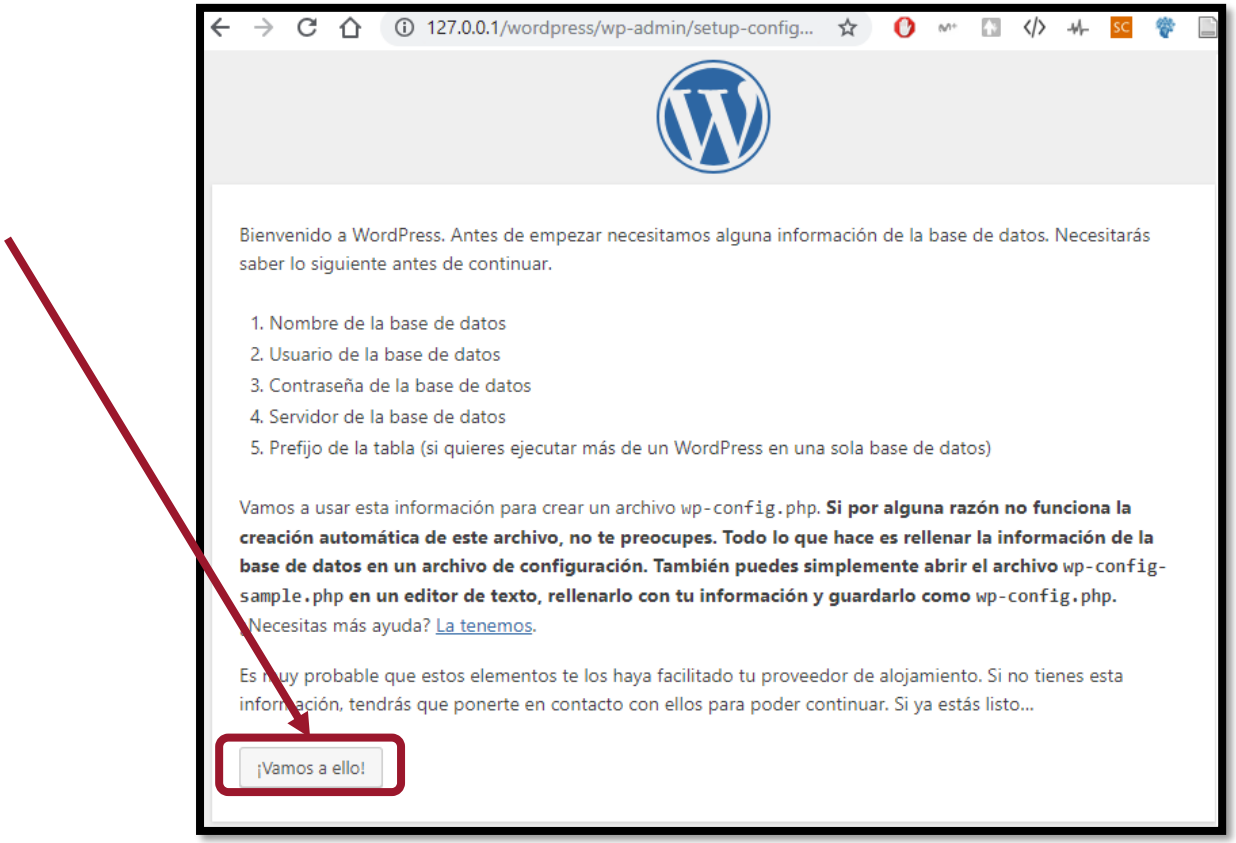

Wordpress installation – Database creation

- Database is created
  - It is empty
  - It will be populated in the Wordpress installation

Wordpress installation

- Let’s continue the installation

Wordpress installation

- Specify database connection details

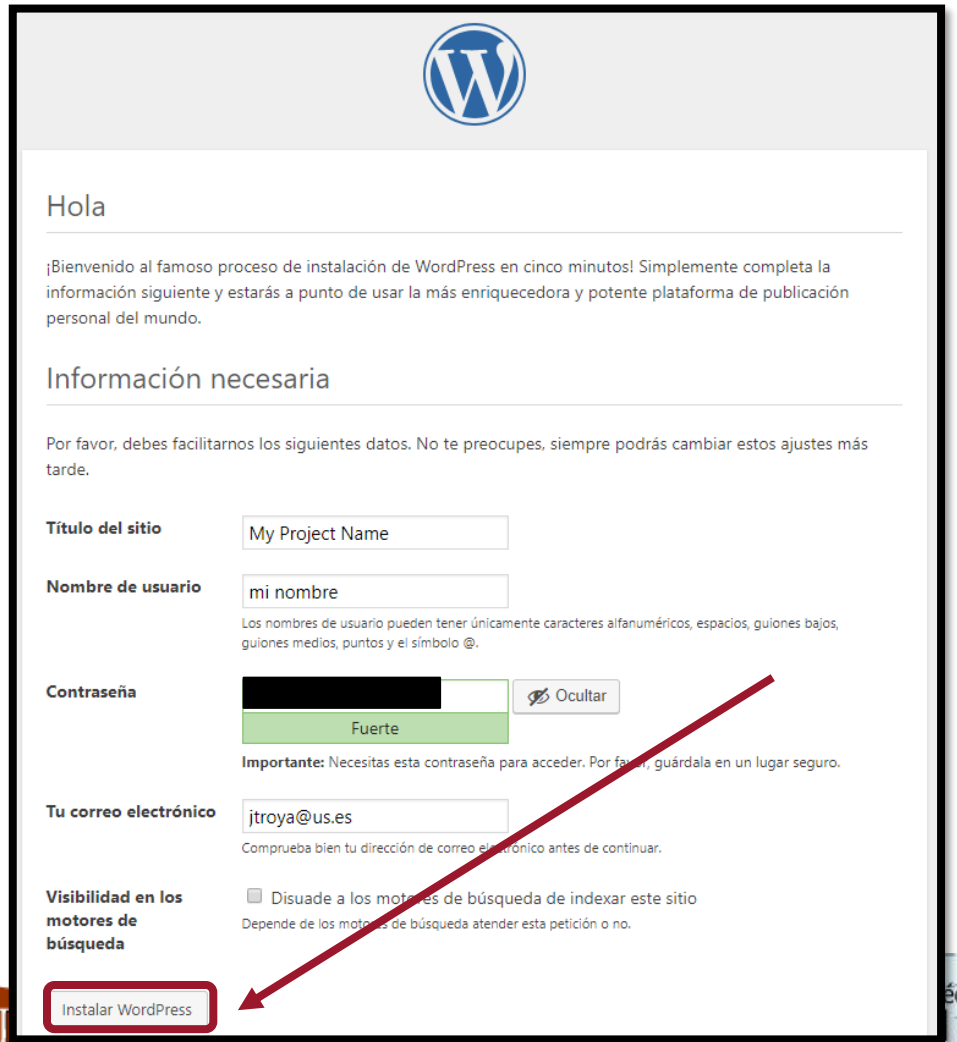

Wordpress installation

- Continue the installation

Wordpress installation

- Enter some info

Wordpress installation

- Installation completed

Outline

- Wordpress installation
- **Wordpress**
- 1st and 2nd deliverables (CMS)

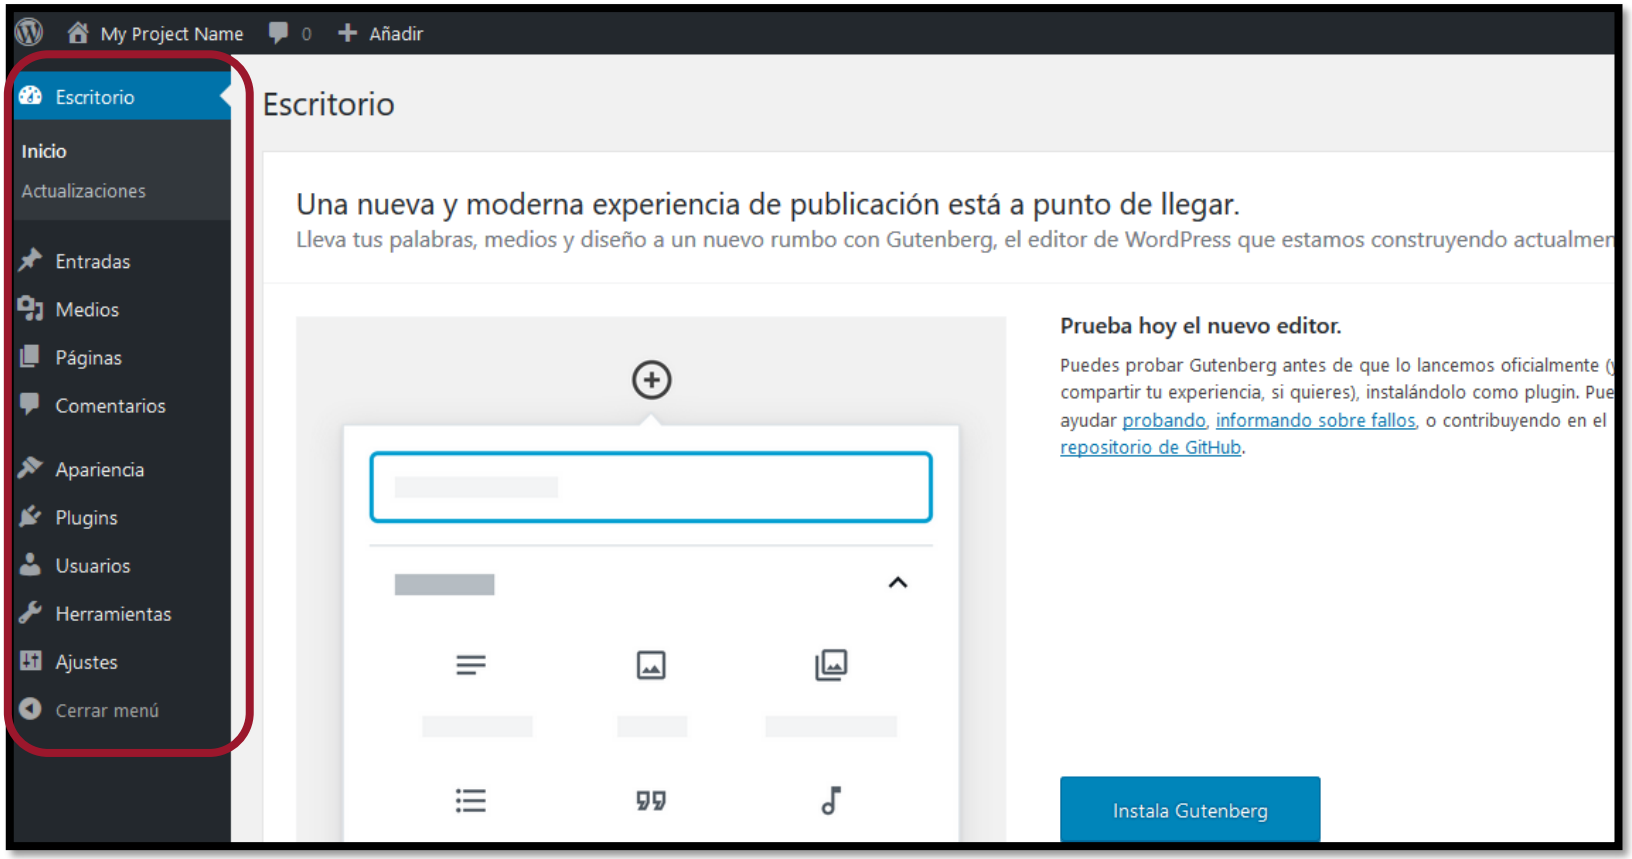

Wordpress

- Access wordpress: http://localhost:8080/wordpress/wp-login.php

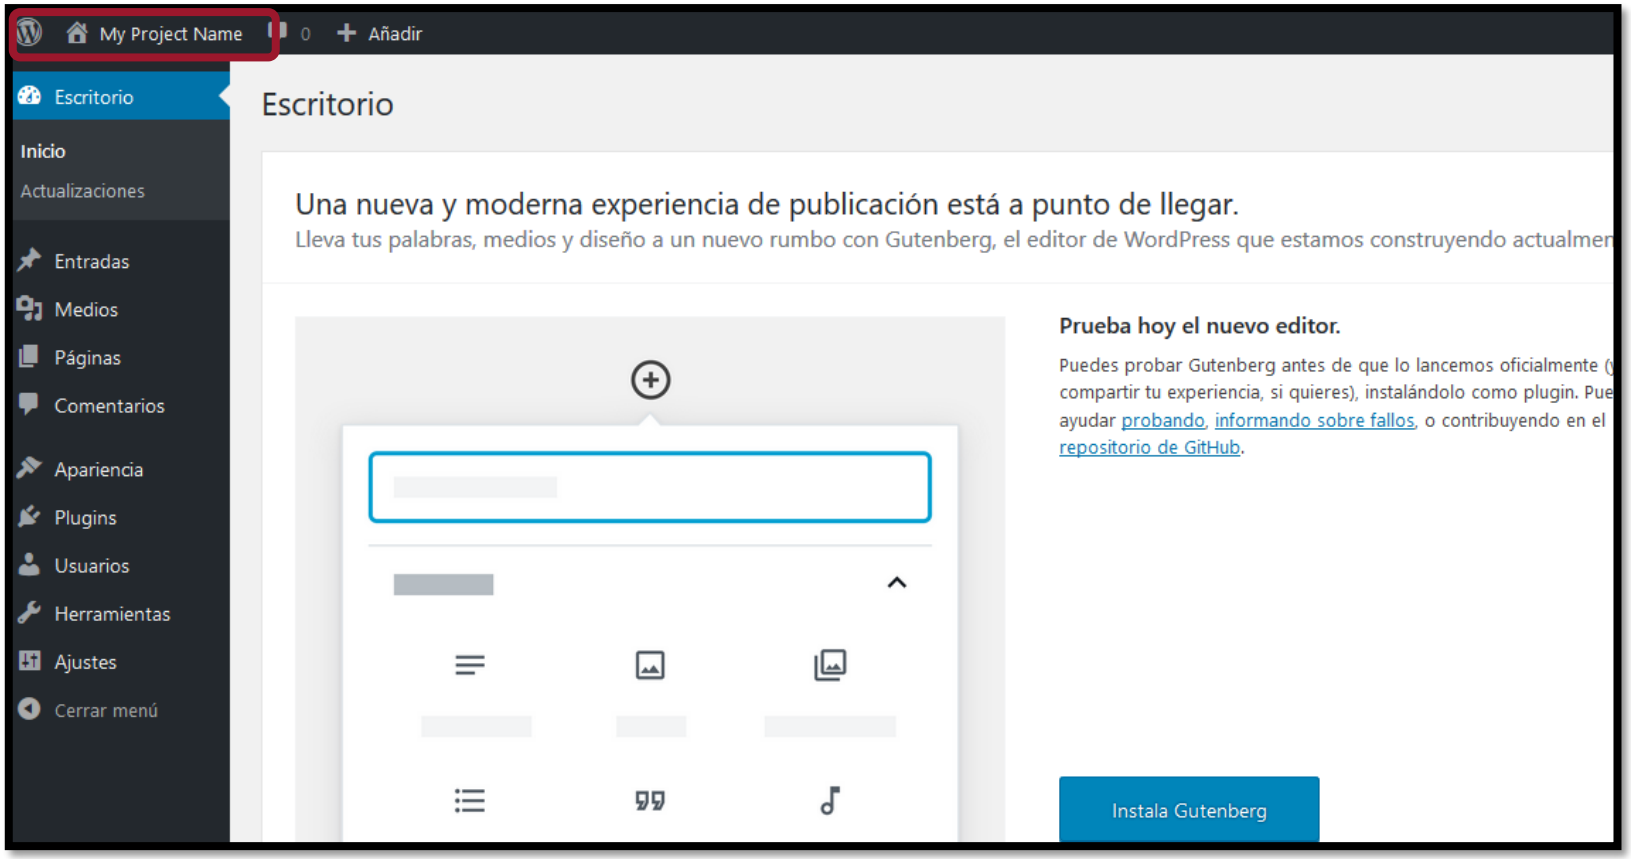

Wordpress

- Study the configuration panel

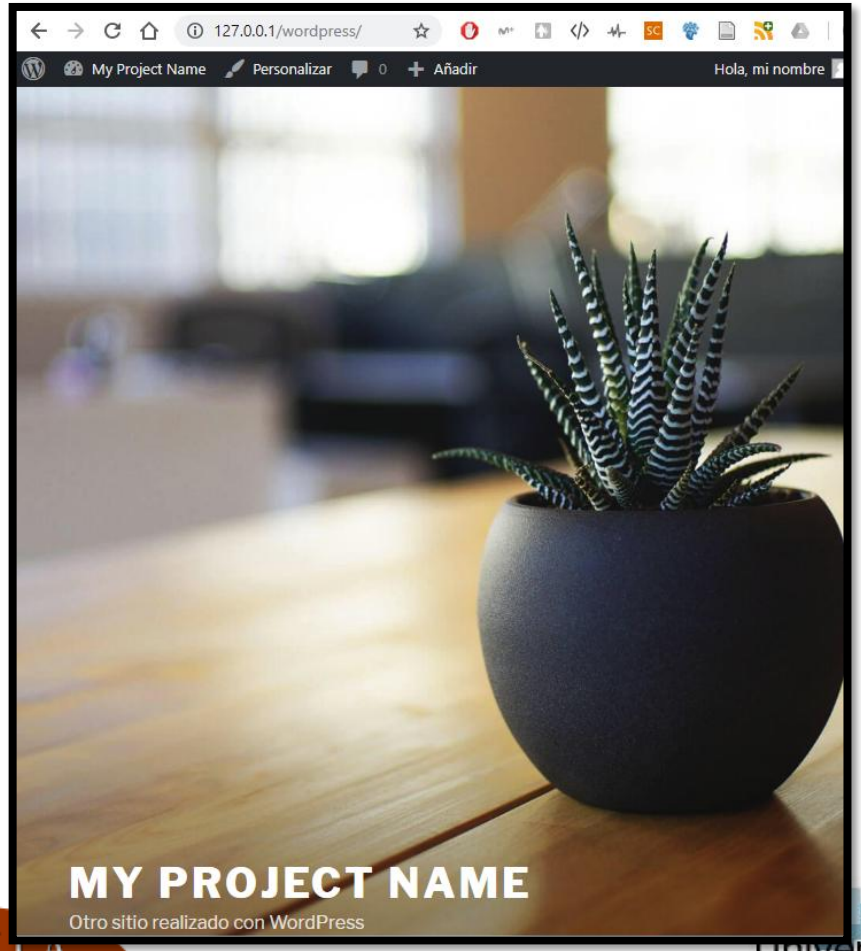

Wordpress

- At any point in time, you can access the current state of your website

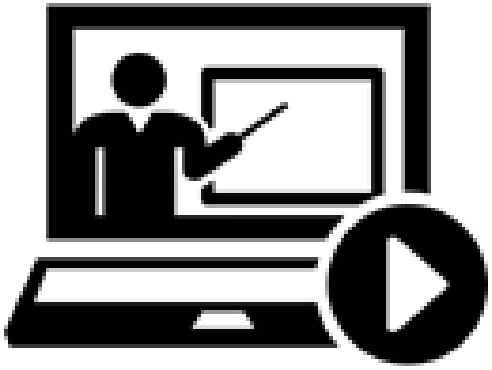

Wordpress

- At any point in time, you can access the current state of your website

Wordpress

- There are hundreds of tutorials online for learning Wordpress
  - Many of them on https://www.wpbeginner.com/

  - Wordpress is very intuitive and building websites is simple

Outline

- Wordpress installation
- Wordpress
- **1st and 2nd deliverables (CMS)**

1st and 2nd deliverables (CMS)

- Sprints 1 and 2 of CMS. The final version must include:
  - Requirements with REM
  - Analysis
  - Design
  - Implementation
- In every deliverable
  - SCRUM backlog, sprint backlog and burndown chart
- Don’t forget to document:
  - Collaborative software (justify your selection)
  - Version control software (if you use any)

1st and 2nd deliverables (CMS)

- **Requirements** with REM (elicited after an interview)
  - Goals
  - Information Requirements
  - UI Requirements
  - Functional Requirements
  - Non-functional Requirements
  - Business Rules

1st and 2nd deliverables (CMS)

- **Analysis** document
  - Mockups of how the website will look like
    - You should show prototypes of your expected webpages and write a description
    - Use software such as Figma
  - Class diagram
    - Capturing menus and the main page
  - All must be documented in a PDF file

1st and 2nd deliverables (CMS)

- **Design** document (pdf)
  - Determine plugins according to your needs and compare at least three of each type
    - Decide the plugins according to different factors
      - Last update
      - Number of downloads
      - User rating
      - …
    - Compulsory to use plugins for Security, Cache, Analytics (specially with Buddypress) and SEO
      - Again, compare some of them with the same functionality and decide which one to use
    - You can use tables to show the comparisons

1st and 2nd deliverables (CMS)

- **Design** document (pdf)
  - Determine themes according to your needs and compare at least three of them
    - Explain why you chose the chosen one

1st and 2nd deliverables (CMS)

- **Implementation** (pdf) file
  - Show screenshots of your page
    - Explain each of them

1st and 2nd deliverables (CMS)

- **Planification** (pdf) file
  - Document selected collaborative software (justify your selection)
  - Document version control software (if you use any)
  - SCRUM methodology (decide which software to use):
    - Show project backlog
    - Show sprint backlog
    - Show burndown chart
